New partnership between acQure and REFLEX brings benefits beyond the surface

A new partnership between acQure and REFLEX will bring access to timely, verified and accurate sub-surface information to the fingertips of GIM Suite users.

Perth, WESTERN AUSTRALIA – 27 September 2017 – acQure Technology Solutions Pty Ltd (acQure), a market-leader in geoscientific information management software solutions, and REFLEX, a pioneer in the development of downhole data acquisition systems, announce a partnership to integrate their innovative technology products.

The integration of acQure's GIM Suite and REFLEXHUB-IQ will vastly improve efficiencies to speed up the data pipeline by removing manual bottlenecks and providing a transparent, seamless data exchange through a secure web link. In addition, consistent and rich meta-data provides a chain of custody for information from the field to the database.

"This is the first initiative of our partnership with REFLEX", said Steve Mundell, Director of Product at acQure.

"The introduction of the integrated and automated workflow, means there is less manual handling of data which can lead to data loss and bottlenecks in process. Improved data governance and data quality, and streamlined access to trusted results is the ultimate outcome and this is keystone to acQure".

REFLEX's Global Manager for Integrated Solutions, Michelle Carey, said: *"We are excited about the partnership with acQure and the value we can provide to our clients through the combination of the REFLEXHUB-IQ and acQure's GIM software.*

Our own award winning REFLEXHUB-IQ is now connected to all our popular survey and core orientation tools, offering secure, reliable information instantly from the field to the office. With built-in QC at the time of data collection and secure chain of custody for data workflows, it offers our clients real-time access to valuable information to make instant decisions. Now with an integration into acQure's GIM software we can provide a complete geoscientific solution."

Customers of acQure and REFLEX will start to benefit from the integration when it is launched in an upcoming release of GIM Suite.

The technology partnership is another step in providing acQure customers with a greater level of connectivity in their operations. REFLEX joins other established acQure technology partners including Esri, ARANZ Geo, Maptek, Corescan, ALS Limited, and Geovariances.

About acQuire:

In 1996, acQuire launched Geoscientific Information Management (GIM) software solutions for the natural resources industries, focusing on exploration, resource development and mining assets. Due to an ongoing commitment to excellence, acQuire reinvests 20-25% of their annual revenue into research and development. The company currently employs over 100 staff working in five offices around the globe, with support centers operating in each major time zone. More than 450 sites benefit from acQuire GIM solutions.

About REFLEX

REFLEX is the leader in real-time sub-surface intelligence solutions for the minerals industry globally. REFLEX's technologies are acknowledged for their ease of use and accuracy and are complemented by unrivalled expertise in geo-scientific data analysis and interpretation. REFLEXHUB-IQ forms the backbone of REFLEX's solutions, providing secure access to relevant information, anywhere, any time. The company continues to be the leading developer of innovative solutions within the minerals sector. For further information visit www.reflexnow.com

REFLEX is part of the IMDEX Group, a leading global mining equipment, technology and services – or METS – company. Our solution sets improve the process of identifying and extracting what is below the earth's surface for drilling contractors and resource companies – we let clients know where it is and what it is, now.
