

# An Industry First for Structural Logging

**Imdex integrates its trusted technologies providing a unique end-to-end solution for clients**

Mining technology company Imdex is pleased to announce the launch of its end-to-end STRUCTURAL-IQ solution at the Mining INDABA event held in Cape Town on 6 February 2017.

The solution is unique to the global minerals industry and provides significant benefits to clients including real-time, secure access to verified structural data directly from the field.

Commenting on the launch of Imdex's STRUCTURAL-IQ SOLUTION, the company's Global Manager for Integrated Solutions, Michelle Carey, said:

*"Our integrated solution will ensure resource companies have confidence in the accuracy of the data they are relying on to make critical drilling and mine planning decisions.*

*"It will also provide clients with operational efficiencies – key workflow processes will be automated and data can be provided in real-time for faster, intelligent decision making. Simply put, resource companies will be able to extract maximum value from their data while enjoying the economic benefits."*

REFLEXHUB-IQ is central to Imdex's STRUCTURAL-IQ solution. The award winning cloud-based Hub stores: core orientation quality control data obtained from the REFLEX ACT core orientation tool; survey measurement data from REFLEX's leading survey instrumentation; and structural data from the REFLEX IQ-Logger.

All of this securely stored data can then be accessed in real-time from the office or the field and seamlessly integrated utilising REFLEX ioGAS software and its Stereonet functionality to complete advanced interpretation and analysis. Imdex's STRUCTURAL-IQ SOLUTION also integrates into any interpretative 3D modelling software.

Importantly, Imdex's STRUCTURAL-IQ SOLUTION contains in-built QA/QC processes, together with workflow automations to reduce risks associated with errors from manual intervention. This is vital when making crucial decisions involving ore-reserve estimation, geotechnical mine design, mine planning and safety.

An additional feature of Imdex's STRUCTURAL-IQ SOLUTION is AMC's COREWELL System, which provides unrivalled protection of the core during recovery. This allows clients to maintain the integrity of their samples and maximise the structural data gathered.
